

APPENDIX G

RANKING OF PROCESSES

G-1: TABULATIONS:

VARIABLE 1: BY CAPITAL COSTS/ANNUAL MT L.S.

VARIABLE 2: BY IRON UNIT COSTS/MT I.U.

VARIABLE 3: BY OPERATING COST/MT L.S.

VARIABLE 4: BY INTERNAL RATE OF RETURN

VARIABLE 5: BY TOTAL ELECTRICAL POWER REQUIRED

**VARIABLE 6: BY TOTAL CUMULATIVE CO₂ EMISSIONS -
PROCESS ONLY**

**VARIABLE7: BY TOTAL CUMULATIVE CO₂ EMISSIONS -
TOTAL INCLUDING ELECTRICAL POWER
GENERATION**

**G-2: VISUAL GROUPINGS OF SORTED AND
RANKED VARIABLES**

Appendix G: Rankings Of Processes

G-1 Ranking by Variables

The Sorted Variable tables in Appendix F were used for a Ranking procedure for the various Alternative Ironmaking Processes. The procedures followed for this Ranking Analysis were as followed:

- Each of the sequenced lists by the index variables above for each of the Alternative Ironmaking Processes were represented by the sorted sequence rankings (i.e. from 1 to 21).
- These sequence ratings (i.e. from 1 to 21) were summed in the following manner.
- The variable rankings based on costs (i.e. variables 1-4 of CAPEX, OPEX I.U., OPEX L.S. and I.R.R.) were summed.
- Similarly, the energy and emissions variable rankings (i.e. variables 5-7 of Electric Power, Process CO₂ and Total CO₂) were summed by process.
- In addition all of the ranking variables were summed (i.e. variables 1-7).
- Based on these summation totals, additional sorts of these grouping totals (1-4, 5-7 and 1-7) were done. That is, the lowest sum of the grouped ranking variables was first, the highest last, etc.
- Again, the sorted Ranking Variable Groups for the processes were arranged into a Lowest Group, A Middle Group and a Highest Group.
- It should be noted that the Ranking Exercise was done for each of the Steel Scrap Price values, i.e. \$100, \$120 and \$140 respectively.

These sorted Ranking Variable Groupings, thus, provide some additional insights into the most attractive Ironmaking Process Alternatives and those that are less attractive. With the added dimension of the independent Steel Scrap Price variable and the impacts on the ultimate Refined Liquid Steel costs, some of the significant impacts of this key variable can be seen more clearly in evaluating the various Ironmaking Processes.

The tables of the Ranked Variables and summation groupings discussed are also provided in this section.

G-2 Sorted and Ranked Process Groupings

As an alternative way of visualizing the Sorted Variable and Ranked Process Groupings, visual representations of each are provided in this section with the members of each process summarized in highlighted bullets.
